IDEATION

Team ID	PNT2022TMID23831
Project Name	Emerging Methods for Early Detection of Forest Fires.

Idea 1: Aerial vehicle

- Drones are used here to capture the image or video clips.
- Then they are processed with image processing techniques to detect the fire.

Idea 2: Satellite

- We use image processing and video analysis by using satellite.

Idea 3: IR camera

- IR cameras can detect heat at the earliest. So that IR cameras can be used.

Idea 4: Sensors

- There are various sensors available today that can be used to alert.

Idea 5: CNN

- Use CNN technology

Idea 6: deep and machine learning

- Using machine deep learning and machine learning
